

Table of Contents

Chapter 25.....	13
Network Based Linux Installation.....	13
Setting Up The Installation Server.....	13
Basic Preparation.....	13
Create The Installation Directories	13
Copying The Files	14
HTTP & FTP Preparation.....	14
NFS Preparation	15
Setup Your Webserver	15
Setup Your FTP Server	16
Create A Special FTP User	16
Setup Your NFS Server	16
Configure Your DHCP Server	17
Creating A Boot CD	17
The Network Installation.....	17
If You Selected The NFS Method.....	18
If You Selected The HTTP Method.....	18
If You Selected The FTP Method.....	18
"Not Selecting" The Non-Anonymous FTP Box.....	18
"Selecting" The Non-Anonymous FTP Box.....	19
Troubleshooting The Network Installation	19
Automating Installation With Kickstart.....	19
How To Create New Kickstart Configuration Files	20
Adding Post Installation Commands	20
A Note About Using anaconda-ks.cfg.....	20
How To Run A Kickstart Installation	20
Using a NFS Server	21
Using a Web Server	21
Booting With Your Kickstart Files.....	21
Conclusion	22
Chapter 26.....	23
Linux Software RAID.....	23
RAID Types	23
Linear Mode RAID	23
RAID 0.....	23
RAID 1	24
Figure 26-1 RAID 0 And RAID 1 Operation.....	24
Figure 26-2 RAID 5 Operation	25
RAID 4.....	25
RAID 5.....	25
Before You Start.....	26
IDE Drives.....	26
Serial ATA Drives.....	26
SCSI Drives.....	26
Should I Use Software RAID Partitions Or Entire Disks?	27
Backup Your System First	27
Configure RAID In Single User Mode.....	27
Configuring Software RAID.....	27
Preparing the Partitions	28
Determining Available Partitions	28
Unmount the Partitions	28

Prepare The Partitions With FDISK.....	29
Use FDISK Help.....	29
Set The ID Type To FD.....	29
Make Sure The Change Occurred.....	30
Save The Changes.....	30
Repeat For The Other Partitions.....	31
Preparing the RAID Set.....	31
Creating the RAID Set.....	31
Confirm RAID Is Correctly Initialized.....	31
Format The New RAID Set.....	32
Create the mdadm.conf Configuration File.....	32
Create A Mount Point For The RAID Set.....	33
Edit The /etc/fstab File.....	33
Mount The New RAID Set.....	34
Check The Status Of The New RAID.....	34
Conclusion.....	34
Chapter 27.....	35
Expanding Disk Capacity.....	35
Adding Disks To Linux.....	35
Scenario.....	35
Determining The Disk Types.....	35
Preparing Partitions on New Disks.....	36
Verifying Your New Partition.....	38
Putting A Directory Structure On Your New Partition.....	38
Migrating Data Over To your New Partition.....	39
Expanding Partitions With LVM.....	41
LVM Terms.....	41
Configuring LVM Devices.....	42
Backup Your Data.....	42
Unmount your /home filesystem.....	42
Determine The Partition Types.....	43
Start FDISK.....	43
Set The ID Type To 8e.....	43
Make Sure The Change Occurred.....	44
Save The Partition Changes.....	44
Define Each Physical Volume.....	44
Run VGscan.....	45
Create A Volume Group For the PVs.....	45
Create A Logical Volume From The Volume Group.....	45
Format The Logical Volume.....	46
Create A Mount Point.....	46
Update The /etc/fstab File.....	47
Mount The Volume.....	47
Restore Your Data.....	47
Get Out Of Single User Mode.....	47
Conclusion.....	47
Chapter 28.....	48
Managing Disk Usage With Quotas.....	48
Setting Up Quotas.....	48
Enter Single-User Mode.....	48
Edit Your /etc/fstab File.....	49
Remount The Filesystem.....	49
Get Out of Single-user Mode.....	49
Create The Partition Quota Configuration Files.....	49

Initialize The Quota Table	50
Edit The User's Quota Information	50
Testing	51
Other Quota Topics	51
Editing Grace Periods	51
Editing Group Quotas	51
Getting Quota Reports	51
Conclusion	52
Chapter 29.....	53
Remote Disk Access With NFS	53
NFS Operation Overview	53
General NFS Rules	53
Key NFS Concepts	53
VFS	53
Stateless Operation	54
Caching	54
NFS And Symbolic Links	54
NFS Background Mounting	54
Hard and Soft Mounts	55
NFS Versions	55
Important NFS Daemons	55
Installing NFS	56
Scenario	56
Configuring NFS on The Server	56
The /etc/exports File	57
Starting NFS on the Server	57
Configuring NFS on The Client	58
Starting NFS on the Client	58
NFS And DNS	59
Making NFS Mounting Permanent	59
The /etc/fstab File	59
Table 29.1 Possible NFS Mount Options	60
Permanently Mounting The NFS Directory	60
Manually Mounting NFS File Systems	61
Activating Modifications To The /etc/exports File	61
New Exports File	61
Adding A Shared Directory To An Existing Exports File	61
Deleting, Moving Or Modifying A Share	61
The NFS Automounter	62
Automounter Map Files	62
Direct Maps	63
Indirect Maps	63
The Structure Of Direct And Indirect Map Files	63
Indirect Map File Example	63
Direct Map File Example	63
Wildcards In Map Files	64
Using the Ampersand Wildcard	64
Using the Asterisk Wildcard	64
Starting Automounter	64
Automounter Examples	65
Troubleshooting NFS	65
Table 29.2 Some Common NFS Error Messages	66
The showmount Command	66
The "df" Command	66
The nfsstat Command	66
Table 29.3 Error Thresholds For The "nfsstat" Command	67

Other NFS Considerations	67
Security.....	68
NFS Hanging.....	68
File Locking	68
Nesting Exports.....	68
Limiting root Access	69
Restricting Access to the NFS server.....	69
File Permissions	69
Conclusion	69
Chapter 30.....	70
Centralized Logins Using NIS.....	70
Scenario	70
Configuring The NFS Server	71
Configuring The NFS Client.....	72
Configuring The NIS Server.....	73
Install the NIS Server Packages.....	73
Edit Your /etc/sysconfig/network File	74
Edit Your etc/yp.conf File	74
Start The Key NIS Server Related Daemons	74
Table 30-1 Required NIS Server Daemons	75
Initialize Your NIS Domain.....	75
Start The ypbind and ypxfrd Daemons	76
Make Sure The Daemons Are Running.....	76
Adding New NIS Users	77
Configuring The NIS Client	78
Run authconfig.....	78
Start The NIS Client Related Daemons	79
Verify Name Resolution.....	79
Test NIS Access To The NIS Server	79
Test Logins via The NIS Server.....	80
Logging In Via Telnet.....	80
Logging In Via SSH.....	80
NIS Slave Servers.....	81
Configuring NIS Slave Servers.....	81
Table 30-2 NIS Master / Slave /etc/hosts Files.....	81
Table 30-3 NIS Master / Slave /etc/yp.conf Files	82
Configuring NIS Clients With Slaves.....	85
Changing Your NIS Passwords	85
When There Is Only An NIS Master	85
Users Changing Their Own Passwords.....	85
User "Root" Changing Passwords	85
When There Is A NIS Master / Slave Pair.....	86
Possible Password Errors.....	86
Segmentation Faults	86
Daemon Errors.....	86
Considerations For A Non NFS Environment.....	86
NIS Troubleshooting.....	87
Conclusion	88
Chapter 31.....	89
Centralized Logins Using LDAP and Radius	89
The LDAP Directory Structure.....	89
Scenario	89
Downloading And Installing The LDAP Packages.....	90
Required LDAP Server RPMS	90

Required LDAP Client RPMs.....	90
Configuring The LDAP Server.....	90
Create a database directory.....	91
Create an LDAP "root" password.....	91
Edit the slapd.conf file.....	91
Start the LDAP daemon.....	91
Convert the /etc/passwd file to LDIF format.....	92
Create the ldapuser test account.....	92
Extract the desired records from /etc/passwd.....	92
Find the conversion script.....	93
Convert the ".ldapuser" file.....	93
Modify the LDIF files.....	93
Edit the user LDIF file.....	93
Create an LDIF file for the "example.com" domain.....	94
Import the LDIF files into the database.....	94
Test the LDAP database.....	94
Configuring The LDAP Client.....	95
Edit the ldap.conf configuration file.....	95
Edit the /etc/nsswitch file.....	95
Create Home Directories On The LDAP Client.....	96
Check if ldapuser is Missing From the /etc/passwd file.....	96
Create The Home Directory For ldapuser On The LDAP Client.....	96
Testing.....	96
Configuring Encrypted LDAP Communication.....	97
Using Transport Layer Security (TLS).....	97
How TLS Communication Works.....	97
Configuring the TLS Server.....	98
Configuring the TLS Client.....	101
TLS Maintenance.....	103
Using stunnel Encryption.....	103
Configuring the stunnel LDAP client.....	103
Configuring the stunnel LDAP server.....	104
Troubleshooting LDAP Logins.....	107
Check Your /var/log/messages file.....	107
Testing Basic Connectivity.....	107
Testing Using ldapsearch.....	107
Use SSH or the Linux console.....	107
Use the tcpdump Command.....	107
Testing Regular LDAP.....	108
Testing Secure LDAP.....	108
LDAP Works but not When I Switch to LDAPS.....	109
Stunnel Doesn't Appear To Work.....	109
LDAP_BIND Errors.....	110
Possible stunnel Errors in Fedora Core 2.....	110
Common LDAP Administrative Tasks.....	110
Starting and Stopping LDAP.....	110
LDAP users changing their own passwords.....	111
Modifying LDAP users by user "root".....	111
The Modify LDAP User Script.....	111
Adding new LDAP users.....	112
Create an LDAP Add User Script.....	112
Add the User to the Database.....	112
Deleting LDAP users.....	113
LDAP Web Management Tools.....	113
Configuring RADIUS for LDAP.....	113
How To Download and Install The FreeRADIUS Packages.....	114
Starting and Stopping FreeRADIUS.....	114

Configuring The /etc/raddb/radiusd.conf File.....	114
Configuring The /etc/raddb/users File	115
Configuring The /etc/raddb/clients.conf File	115
Troubleshooting And Testing RADIUS	116
Server Setup.....	116
Linux Client Setup.....	116
Cisco Client Setup.....	117
Errors With Fedora Core 2.....	117
Conclusion	118
Chapter 32.....	119
Controlling Web Access With Squid.....	119
Download and Install The Squid Package.....	119
Starting Squid.....	119
The /etc/squid/squid.conf File.....	120
The Visible Host Name	120
Access Control Lists	120
Restricting Web Access By Time	120
Restricting Access to specific Web sites	121
Restricting Web Access By IP Address.....	122
Password Authentication Using NCSA.....	122
Forcing Users To Use Your Squid Server	124
Making Your Squid Server Transparent To Users	124
Squid Transparent Proxy Configuration	124
Configuring iptables to Support the Squid Transparent Proxy	124
Manually Configuring Web Browsers To Use Your Squid Server	126
Squid Disk Usage.....	126
Troubleshooting Squid.....	126
Conclusion	127
Chapter 33.....	128
Modifying The Linux Kernel To Improve Performance	128
Table 33-1: Kernels Found On Fedora Installation CDs.....	128
The Pros And Cons Of Kernel Upgrades	128
The Kernel Sources Package.....	129
Installing Kernel Sources.....	129
Kernel Modules.....	131
Reasons For Kernel Modules.....	131
How Kernel Modules Load When Booting	132
Modules And The grub.conf File	132
Loading Kernel Modules On Demand	133
Creating A Custom Kernel	134
Make Sure Your Source Files Are In Order	134
The ".config" File.....	134
Backup Your Configuration.....	135
Customizing The ".config" File	135
Table 33-2 Scripts For Modifying The .config File.....	135
Table 33-3 Kernel Option Choices.....	136
Table 33-4 Kernel Configuration Options.....	137
Configure Dependencies.....	138
Edit The Makefile To Give The Kernel A Unique Name	138
Compile A New Kernel.....	138
Build The Kernel's Modules	139
Copy The New Kernel To The /boot Partition.....	139
Updating GRUB	139
Kernel Crash Recovery.....	140

How To Create A Boot CD.....	140
Updating The Kernel Using RPMs	141
Conclusion	141
Chapter 34.....	142
Basic MySQL Configuration.....	142
Preparing MySQL For Applications.....	142
Installing MySQL	142
Starting MySQL	143
The /etc/my.cnf File.....	143
The Location of MySQL Databases	143
Creating a MySQL "root" Account	143
Accessing The MySQL Command Line	144
Creating and Deleting MySQL Databases	144
Granting Privileges to Users.....	145
Running MySQL Scripts To Create Data Tables	145
Viewing Your New MySQL Databases.....	146
Listing The Data Tables In Your MySQL Database	146
Viewing Your MySQL Database's Table Structure.....	147
Viewing The Contents Of A Table.....	147
Configuring Your Application	148
Table 34.1 Required PHP and Perl RPMs for MySQL Support.....	148
Recovering / Changing Your MySQL Root Password.....	148
MySQL Database Backup.....	150
MySQL Database Restoration.....	150
MySQL Table Backup and Restoration	150
Very Basic MySQL Network Security	151
Basic MySQL Troubleshooting	152
Connectivity Testing	152
Test Database Access	152
A Common Fedora Core 1 MySQL Startup Error.....	153
Conclusion	153
Chapter 35.....	155
Configuring Linux VPNs.....	155
VPN Guidelines	155
Scenario	155
Figure 35-1 Openswan Topology Diagram.....	156
Download And Install The Openswan Package.....	156
How to get Openswan Started	156
Get The Status Of The Openswan Installation.....	157
How to fix common Status errors.....	157
IP forwarding.....	157
Opportunistic Encryption DNS Checks:	158
VPN Configuration Steps (Using RSA Keys).....	158
The /etc/ipsec.conf file.....	158
Table 35-1 Parameters of the /etc/ipsec.conf file.....	159
Obtaining RSA Keys.....	159
Creating Your Own Keys.....	159
Get The Left Public Key	160
Get The Right Public Key.....	160
Edit the /etc/ipsec.conf Configuration File	160
Some Important Notes About The /etc/ipsec.conf File.....	161
Restart Openswan	161
Initialize The New Tunnel.....	161
Testing The New Tunnel	162

Possible Changes To IP Tables NAT/Masquerade Rules.....	162
How To Ensure Openswan Starts When Rebooting.....	162
Using Pre-Shared Keys (PSK).....	163
Troubleshooting Openswan.....	164
Determine the Tunnel Status.....	164
Testing VPN Connectivity	165
Check The Routes	165
Using TCPdump	166
Protected Interface TCPDUMP Output From "vpn2".....	166
Unprotected Interface TCPDUMP Output From "vpn2".....	166
Check Syslog Error Messages.....	166
"Invalid Key" Messages	166
Conclusion	167
Appendix I.....	168
Miscellaneous Linux Topics.....	168
Fedora Core 3.....	168
Linux Security With TCP Wrappers.....	168
The TCP Wrappers File Format.....	169
Determining the TCP Daemon's Name.....	169
Additional TCP Wrappers Help.....	169
Adjusting Kernel Parameters.....	170
Running Linux Without A Monitor	171
Preparing To Go "Headless"	171
Configuration Steps	172
